

Absorbable Surgical Suture

EGYCRYL

- Polyglycolic co-lactide (PGLA)
- Synthetic
- Multifilament
- Dyed

STERILE | EO

1) Description

- A sterile synthetic absorbable surgical suture obtained by linear polymerization of 90% glycolic acid and 10% lactic acid (Polyglycolic co-lactide 910)
- Braided multifilament, coated with equal combination of copolymer (glycolic acid and lactic acid) and calcium stearate
- Inert, non-antigenic, and non-pyrogenic
- Available dyed (violet) and undyed
 - Dyed: D&C violet no. 2 (C.I.60725), FDA approved dye
 - Undyed: milk white (beige) in color
- Complies with all requirements of USP and EP
- Sterilized using Ethylene Oxide (EO)

2) Indications

Indicated for use in general soft tissues approximation or ligation including ophthalmic surgery.

3) Performance

Elicits a minimal tissue reaction and growth of fibrous connective tissue.

Absorption occurs by means of hydrolysis, where the copolymer degrades to glycolic and lactic acid which are subsequently absorbed and metabolized in the body.

Absorption begins with gradual loss of tensile strength followed by complete loss of mass.

Breaking strength retention: *In-vivo* test shows that EGYCRYL retain equals to an average of 75% of original tensile strength after 2 weeks from implantation.

Note: Complete absorption will essentially occur from 55 to 70 days. This is an average with respect to USP size difference.

4) State of Product & Way of Supply

- Sterile
- USP sizes ranging from 8/0 to 2 (metric sizes: 0.4 to 5)
- In a variety of lengths with or without needles
- Dozen box
